

Graduation Project Proposal – Feb 2015

Tech Specs - Lucia Dossin

I am working with the idea of presenting an interactive installation, using a voice interface.

For that installation, I will need:

- . a computer – running on Linux or OS X (including a small monitor, for setting up the work)
- . a microphone
- . a sound speaker
- . possibly led lights, too

I aim to keep the installation as minimalistic as possible regarding its appearance. The speakers will not be visible objects, but will be embedded into a ceiling. If there is any light (color leds, to indicate listen/speak modes), it will also come from the ceiling. That may mean that the ideal space for the installation is some kind of cabin/small room.

It is not yet defined whether the installation will run a shell script or browser-based code.
